About

With over 20 years of experience in the software industry, Hugo has overcome many challenges and experienced various roles. However, Hugo's true strengths extend beyond his technical expertise.

Hugo likes keeping curious and humble in a very fast-paced industry and would never claim to be an expert. As a passionate team player, he brings mentoring skills, warmth, and humor to any situation, adapting quickly to new challenges and environments.

Hugo thrives on tackling hard challenges and delivering clean, high-quality solutions that are easy to read and maintain. He finds great satisfaction in writing code and mentoring others, preferring to avoid leadership positions at this stage in his career.

Hugo is seeking a new remote position where he can concentrate on front-end technologies such as React, Redux, TypeScript, and RxJs as an individual contributor.

Interesting samples

- A request queue solution that prioritizes internal api calls over external api calls. The end result made the product more responsive to user actions even with long running queries:
<https://github.com/grafana/grafana/pull/26947>.
- A Kanban dashboard for Trello boards:

Happy Software Dude & Coach

Aptitud

Dec 2012 - Mar 2017

Stockholm, Sweden

I'm a Full Stack developer with a strong focus on Web development. I'm not religious about specific languages, frameworks or tools. Instead I find great passion in exploring new languages, frameworks and tools. I'm a strong team player that brings lots of skills, warmth and humor to the team. I'm as equally passionate about coaching team members as I am being coached by team members.
